Basic Installation Guide

Step 1: Choose a safe, level location. Layout the first course 3 stones wide and 5 stones long. Be sure to have it completely level.

Step 2: For the second and all courses start with a corner and stagger the stones. This will create an off-set, staggered look and also provide structural interlock.

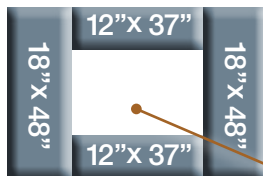

Step 3: Check to make sure each course is square and level as you build.

Helpful hint: Dry stack the entire structure, check the layout, make sure the grill fits into opening, de-stack, then rebuild with adhesive.

Step 4: Continue to layout each course until the desired height is reached. The Kit includes enough stones for 8 complete courses and the blue Stone top.

Step 5: Place the 2 large blue stone pieces on the ends leaving enough space for the two inside pieces. Then place the 2 small pieces inside the larger ones. Adjust the pieces so that you have a consistent overhang all the way around. Place the grill insert into the opening. Wait 24 hours for the adhesive to cure.
